DETAILED ACTION

In response to Amendment filed October 20, 2003

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 – 18 are rejected under 35 U.S.C. 102 (e) as being anticipated by Meyer (US 6,601,307).

Meyer discloses a measuring device comprising a rotor fastened to a shaft (5) that rotates about an axis of rotation, a scanning unit (See Column 2, lines 65 – 67) spaced from said rotor and attached to a stator (3), and a base (20). Meyer also discloses a coupling (2) connected to the base and the stator of an angle measuring system for permitting radial and axial compensating movements of said stator with respect to the base and said axis of rotation, said coupling produced in one piece as a punched and bent element and being fastened by screws. Meyer further discloses a first and second stops 6, 7, 8, 9) to limit the radial and axial

movements being defined at least in part by a first and a second screw projecting into an opening of the stator and / or base, and also discloses projecting strips wherein a coupling is screwed, and wherein said first stop at the base is defined by a screw projecting / projecting strip into an opening of said base (See Columns 3 and 4, lines 15 – 45 and 6 – 53 respectively).

Meyer further discloses said first and second stops at said base and stator being defined by the first and second screws projecting into an elongated opening of the base and stator. Meyer also discloses the axial and radial compensating movement performed in at least two directions, perpendicular and parallel to one another (See Columns 3 and 4, lines 15 – 45 and 6 – 53 respectively).

Response to Arguments

3. Applicant's arguments, see pages 6 – 7 of Applicant remarks, filed October 20, 2003, with respect to the rejection(s) of claim(s) 1 - 12 under USC 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Meyer (US 6,601,307).
